The table shown summarizes the number of employees at each of the **17** restaurants in a town.

Number of employees	Number of restaurants
2 to 7	2
8 to 13	4
14 to 19	2
20 to 25	7
26 to 31	2

Which of the following could be the median number of employees for the restaurants in this town?

- A. 2
- B. 9
- C. 15
- D. 21

The dot plots represent the distributions of values in data sets A and B.

Which of the following statements must be true?

- I. The median of data set A is equal to the median of data set B. ✓
- II. The standard deviation of data set A is ~~equal~~ to the standard deviation of data set B. ✗
- ✗ I only
- B. II only
- C. I and II
- D. Neither I nor II
- เปรียบเทียบ
- | | Med | S |
|---|------------|--------|
| A | $N_q = 13$ | 1.8371 |
| B | $N_q = 13$ | 2.1213 |

	Med	S
A	$N_q = 13$	1.8371
B	$N_q = 13$	2.1213

The box plots summarize the masses, in kilograms, of two groups of gazelles. Based on the box plots, which of the following statements must be true?

- A. The mean mass of group 1 is greater than the mean mass of group 2.
 - B. The mean mass of group 1 is less than the mean mass of group 2.
 - ~~C~~ The median mass of group 1 is greater than the median mass of group 2.
 - D. The median mass of group 1 is less than the median mass of group 2.
- Handwritten notes:*
- Mean comparison: $\left. \begin{matrix} A \\ B \end{matrix} \right\} \text{Not possible}$
 - Median comparison: $Med_1 > Med_2$

$$\text{Med}_A = N_8 = 23$$
$$\text{Med} = N_8 + 56 = 79$$
$$R_A = R_B$$

- The dot plot represents the 15 values in data set A. Data set B is created by adding 56 to each of the values in data set A. Which of the following correctly compares the medians and the ranges of data sets A and B?
- A. The median of data set B is equal to the median of data set A, and the range of data set B is equal to the range of data set A.
 - B. The median of data set B is equal to the median of data set A, and the range of data set B is greater than the range of data set A.
 - ~~C.~~ The median of data set B is greater than the median of data set A, and the range of data set B is equal to the range of data set A.
 - D. The median of data set B is greater than the median of data set A, and the range of data set B is greater than the range of data set A.

Two data sets of **23** integers each are summarized in the histograms shown. For each of the histograms, the first interval represents the frequency of integers greater than or equal to **10**, but less than **20**. The second interval represents the frequency of integers greater than or equal to **20**, but less than **30**, and so on. What is the smallest possible difference between the mean of data set A and the mean of data set B?

- A. 0
- ~~B. 1~~
- C. 10
- D. 23

The two box plots show the distribution of number of books read over the summer by the students in two different English classes. What is the positive difference between the ranges of number of books read over the summer for the two classes?

$$R_A = 5 - 0 = 5$$

$$R_B = 10 - 1 = 9$$

$$\begin{aligned} |R_A - R_B| &= |5 - 9| \\ &= 4 \end{aligned}$$

34	4	7
38	5	5
42	7	4
46	9	2

Data set A and data set B each consist of 27 values. The table shows the frequencies of the values for each data set. Which of the following statements best compares the means of the two data sets?

- ☒ The mean of data set A is greater than the mean of data set B.
- ☒ B. The mean of data set A is less than the mean of data set B.
- ☒ C. The mean of data set A is equal to the mean of data set B.
- ☐ D. There is not enough information to compare the means of the data sets.

Number of bursts

The dot plot represents a data set of the number of bursts for **13** eruptions of a steam vent. If an additional eruption with **11** bursts is added to this data set to create a new data set of **14** eruptions, which of the following measures will be greater for the new data set than for the original data set?

- I. The median number of bursts
 - II. The mean number of bursts
- A. I and II
- B. I only
- C. II only
- D. Neither I nor II

ไม่ใช้กฎเครื่องคิดเลข
ตัวเพิ่มใหม่
 $\bar{x}$ เก่า, $\bar{x}$ ใหม่
เป็น outlier และ
 $\bar{x}_{\text{ใหม่}} > \bar{x}_{\text{เก่า}}$

Med เก่า = $N_{36} = 17$
Med ใหม่ = $\frac{N_{36} + N_{37}}{2} = 17$

The frequency table summarizes a data set of the weights, rounded to the nearest pound, of 71 tortoises. A weight of 39 pounds is added to the original data set, creating a new data set of the weights, rounded to the nearest pound, of 72 tortoises. Which statement best compares the mean and median of the new data set to the mean and median of the original data set?

- A. The mean of the new data set is greater than the mean of the original data set, and the median of the new data set is greater ~~than~~ the median of the original data set.
- ~~B. The mean of the new data set is greater than the mean of the original data set, and the medians of the two data sets are equal.~~
- C. The mean of the new data set is less ~~than~~ the mean of the original data set, and the median of the new data set is less than the median of the original data set.
- D. The mean of the new data set is less ~~than~~ the mean of the original data set, and the medians of the two data sets are equal.

Data set A consists of 10 positive integers less than 60. The list shown gives 9 of the integers from data set A.
43, 45, 44, 43, 38, 39, 40, 46, 40
The mean of these 9 integers is 42. If the mean of data set A is an integer that is greater than 42, what is the value of the largest integer from data set A?

$$\frac{42(9) + X}{10} > 42 \rightarrow X > 42$$

$$\begin{matrix} X < 60 \\ X > 42 \end{matrix}$$

$$42 < X < 60$$

X ต้องบวกกับ 42(9)
ให้หน่วยของผลลัพธ์
ต้องเป็น 0 เพราะตัวหาร
เป็น 10

← $\frac{42(9) + X}{10}$ ต้องลงตัว
